

Enhanced Video Software Feature Set

DigitalSENTRY 4.0

New Software Features - Digital Video Management

DigitalSENTRY version 4.0 introduces a range of new functionality including the support for IP PTZ cameras, support for MPEG-4 IP cameras, Easy Evidence, DVD+RW, digital PTZ via mouse wheel, and is based on Microsoft Windows XP Professional operating system. Version 4.0 is supported on all DigitalSENTRY product modules.

Support for MPEG-4 IP Cameras

In addition to supporting traditional MJPEG-based IP cameras/IP converters, DS 4.0 introduces support for MPEG-4 based IP cameras/IP converters. Some camera manufacturers offer cameras which can run in either MJPEG or MPEG-4 modes. DS 4.0 now supports both video compression modes.

Easy Evidence

When an out-of-the-ordinary event occurs, such as a robbery, the last thing you want to have to recall is a list of procedures for exporting video to provide to the authorities. Easy Evidence eliminates that problem. Simply configure the Easy Evidence feature when programming your system, setting parameters for where to export the video, whether to a CD-RW or network drive, and how much recorded video to include. Once set, if an emergency occurs, users can simply push the blue Easy Evidence button, and the information is automatically exported to a CD/DVD.

Digital PTZ via Mouse Wheel

The DigitalSENTRY user will be able to select a mode whereby they can hover the mouse over a fixed camera's video window and electronically Pan, Tilt and Zoom into and around the camera's field of view via the mouse wheel and buttons. This provides a more intuitive method of navigating the camera's field of view.

Windows® XP Pro Operating System

DigitalSENTRY version 4.0 supports the Windows XP Professional operating system. Windows XP Pro is a common operating system that most customers are comfortable and familiar with.

Support for IP PTZ Cameras

In addition to supporting traditional fixed IP cameras, DS 4.0 introduces support for IP PTZ cameras. Support for Sony and Axis PTZ cameras is available initially.

Analog/IP Hybrid Solutions

DigitalSENTRY version 4.0 provides optional support for up to 8 IP devices per DVMS. This allows all DigitalSENTRY DVMS to support both IP devices and traditional analog camera feeds to operate side-by-side all within a single user interface and chassis.

DVD+RW Support

DigitalSENTRY version 4.0 supports the use of a DVD+RW optical drive instead of a traditional CD+RW. Users can take advantage of the extra storage space provided by a DVD allowing for longer exports. A DVD provides 4.7GB of storage as opposed to 704MB in a CD. The DVD+RW device that Integral offers supports both DVDs and CDs.
